Insights and recommendations

Insights

1. From past trend, Mumbai West DC, Kolkata Central DC and Delhi Ncr Fulfillment hub have relatively larger estimated revenue at risk with high risk products and lower avg days of cover.

   From recent data, Mumbai West DC warehouse has the highest estimated revenue at risk (₹ 45.96 Lakh).

   It also has the maximum number of high risk products (55) and the lowest Avg. days of Cover (88.2 days) among all warehouses.

   Delhi Ncr Fulfillment Hub is the second highest warehouse having ₹ 44.40 Lakh estimated revenue at risk with 51 high risk products and 98.67 Avg. Days of Cover.

2. Kolkata Central DC warehouse recorded 766 historical out of stock observations, the highest among all 6 warehouses.

   Recently it again had the highest number of out of stock products (51).

   Historical stockout pattern shows recurring problem rather than single isolated incident.

3. Accessories product category is having the highest and persistent warehouse-wide stockout observations in history.

   In Oct 2026, it also has the warehouse-wide highest out of stock products (35) and highest high risk products (53).

4. From historical trend, Mobile Phone has the highest warehouse-wide estimated revenue at risk (₹ 12.65 Cr), Laptop has the second highest in this case (₹ 7.34 Cr).

   In recent data also, Mobile Phone has the highest warehouse-wide estimated revenue at risk (₹ 68.91 Lakh), Laptop has the second highest in this case (₹ 49.45 Lakh).

   Recently Delhi Ncr Fulfillment Hub has the highest estimated revenue at risk in Mobile Phone (25.26 Lakh) and Mumbai West DC has the highest estimated revenue at risk in Laptop (₹ 17.06 Lakh).

5. From historical trend, Storage, Accessories and Mobile Phone are the lowest category in terms of Avg. Days of Cover.

   Recently, Storage products have critically lowest inventory coverage across all warehouses except Nagpur Transit Warehouse.

6. Certain products have warehouse-wide maximum repetations in stockout across almost the entire historical period.

   Those products are Vistara Webcam 169, Novatech Android Smartphone 088, Orbis Led Monitor 343, Intra Headphones 295, Aster Earbuds 316.

7. Some Products have substantial current estimated revenue at risk.

   Those products are shown in the table below:

Warwhouse	Product_Name	Estimated Revenue at Risk
Mumbai West DC	Orbis Gaming Laptop 026	₹ 8.36 Lakh
Mumbai West DC	Intra Android Smartphone 052	₹ 7.49 Lakh
Delhi Ncr Fulfillment Hub	Orbis Featurephone 090	₹ 5.85 Lakh
Delhi Ncr Fulfillment Hub	Bluepeak iOS Smartphone 059	₹ 4.91 Lakh
Kolkata Central DC	Orbis iOS Smartphone 062	₹ 4.66 Lakh
Nagpur Transit Warehouse	Teknova Ultrabook 039	₹ 4.27 Lakh

8. Stockout frequency has not improve consistently over time.

   June 2025 recorded the highest stockout observations

   Stockout declined to 148 in Aug 2025.

   March and April 2026 again each recorded 274 stockout observations.

September 2026 improved to 176 but October 2026 increased to 236 observations, 34% higher.

9. In May 2025, stock received were insufficient to match demand whereas June 2025 and July 2025 has excess stock received which may effect procurement optimisation.
10. Chennai Service Warehouse has a recurring high-risk Networking product despite its relatively comfortable overall inventory position.

Recommendations

1. Focus on Mumbai West DC and Delhi Ncr Fulfillment Hub, which have the highest estimated revenue at risk. Prioritize replenishment of high value products with zero or critically low avaiable stock.
2. Investigate products repeatedly experiencing stockouts at Kolkata Central DC and introduce warehouse-specific reorder points and safety stock levels to improve inventory availability.
3. Accessories consistently record the highest historical stockout frequency across all six warehouses. Review demand patterns, supplier lead times and reorder point settings to prevent recurring shortages.
4. Prioritize Mobile Phones replenishment at Delhi Ncr, Mumbai and Kolkata due to their significant revenue exposure. Maintain product specific safety stock for high demand smartphone models.
5. Review Storage category inventory at Delhi NCR, Mumbai and Bengaluru, where Avg. Days of Cover are relatively low. Adjust replenishment quantities according to product demand and supplier lead times.
6. Closely monitor repeatedly unavailable products such as PRD0212(Nagpur), PRD0343(Delhi and Mumbai), PRD0088(Bengaluru and Chennai) and PRD0169(Kolkata and Nagpur). Conduct root cause analysis and establish corrective replenishment plans.
7. Investigate recurring late purchase orders, particualarly at Delhi NCR and Bengaluru. Evaluate supplier reliability, introduce overdue-order escalation procedures and consider approved alternative suppliers for critical products.
8. Indentify slow moving and excess inventory in Chennai and evaluate transferring suitable products to warehouses experiencing shortages, particularly Delhi and Mumbai.
9. Compare historical monthly sales, stock receipts and stockout trends to adjust procurement quantities before periods of increased demand. Avoid relying exclusively on fixed monthly purchasing quantities.
10. Introduce monthly management reviews covering stockout frequency, days of cover, high-risk products, revenue at risk and supplier delivery performance. Assign corrective actions to warehouse and procurement teams and track their resolution.
